EDUCATION

Johns Hopkins University , Baltimore, MD	GPA: 4.00 / 4.00	Aug 2023 – May 2025 *expected
MSE, Biomedical Engineering (Neuroengineering and Medical Devices Focus)		
<i>Thesis Area:</i> Multimodal feedback in augmenting perception and rehabilitation • <i>Advisor:</i> Jeremy D. Brown, PhD		
<i>Relevant Courses:</i> Neural Implants & Interfaces, Haptic Interfaces, Medical Instrumentation, Rehabilitation Engineering		
College of Engineering Pune (COEP) , Pune, India	GPA: 8.24 / 10.00	Aug 2019 – May 2023
BTech, Electronics and Telecommunication Engineering		
<i>Relevant Courses:</i> Microcontrollers, Digital Signal Processing, Sensors and Automation, Machine and Deep Learning		

NOTABLE AWARDS AND HONORS

First Class with Distinction • College of Engineering Pune, India (highest awarded GPA-based merit)	May 2023
Best Paper Award • International Conference on Biomedical Engineering Science and Technology, India	Feb 2023
Mitacs Globalink Award (CA \$9,915) • Dalhousie University, Canada (among students from 17 countries)	May 2022
Best Project Award • IEEE National Level Project Competition, India (awarded among 1,100+ projects)	Jun 2021

RESEARCH EXPERIENCE

Johns Hopkins University • Haptics and Medical Robotics Lab ↗	Baltimore, MD
<i>Graduate Research Assistant • Advisor:</i> Jeremy D. Brown, PhD ↗	Jan 2024 – Present

Multimodal Visual-Haptic Neurorehabilitation for Post-Stroke Finger Dexterity

- Building a **virtual task-based rehabilitation device to assess and enhance post-stroke finger dexterity**, recording 3D isometric forces at 10kHz 2mN resolution using Python, Teensy MCU. Integrating voice coil-based haptic feedback with visual feedback led to 27% improvement in motor outcomes in 10 healthy participants compared to visual feedback alone. Highlights the need for multimodal feedback in sensorimotor rehabilitation. **Oral presentation at BMES 2024.**
- Validated subjective personalization of haptic and visual feedback through cross-modal matching with 12 additional healthy participants, tailoring feedback to account for individual differences in sensory perception after stroke. **First-author paper submitted to IEEE ICORR (RehabWeek) 2025.**

Pneumatactors: Soft Multimodal Haptic Interfaces

- Engineering “pneumatactors” – a novel **pneumatic tactor haptic interface designed for co-located stimulation of fast and slow adapting mechanoreceptors**, enhancing cognitive salience. 3D-printed with flexible TPU, TPE to match mechanical impedance of human skin for intuitive interaction. Designed transistor-based solenoid valve switches to deliver 0–3.3 kPa pressure and 0–147 Hz frequency, outperforming existing methods in the lower bandwidth range. Integrating into prosthetic hand to assess perceptual benefits. **Demonstrated live at IEEE Haptics Symposium, US Senate Caucus 2024.**

Harvard University • Biohybrid Organs and Neuroprosthetics Lab ↗	Cambridge, MA
<i>Research Fellow • Advisor:</i> Shriya S. Srinivasan, PhD ↗	May 2024 – Aug 2024

Peripheral Nerve Stimulation to Modulate Cancer Tumor Metastasis

- Designed **over-the-skin peripheral nerve stimulation paradigms to modulate melanoma tumor metastasis** in mice models, leveraging modified TENS stimulators. Conducted pilot studies on 15 mice at varying stimulation frequencies, uncovering a frequency-dependent relationship between nerve stimulation and tumor innervation, confirmed through histology. Demonstrated a novel, non-invasive, and accessible alternative to invasive treatments for tumor control.
- Investigated **mechanisms underlying glioblastoma multiforme interactions with the nervous system**, targeting parasympathetic pathways to disrupt tumor-driven plasticity supporting growth. Designed, prototyped, and assembled RF-powered wireless vagus nerve PCB stimulators (Ø 13 mm) capable of delivering up to 1 kHz monophasic pulses using LDOs and oscillators in freely moving rats, enabling untethered power harvesting and stimulation.

Surgical Approach for Treating Stress Urinary Incontinence

- Innovated and tested a **fully endogenous muscle graft-based surgical technique** for treating stress urinary incontinence, featuring a 30-minute procedure with potential for fully laparoscopic implementation and superior efficacy compared to urethral devices. Conducted pilot surgeries on 5 rats, synchronizing bladder pressure, flow, and tension using a custom-designed PCB to assess and analyze urodynamic parameters. Results demonstrated therapeutic potential.

Johns Hopkins University • Medical Ultrasound Imaging and Intervention Collaboration [↗](#) Baltimore, MD
Graduate Research Assistant • Advisors: Emad M. Boctor, PhD [↗](#) and Jeeun Kang, PhD [↗](#) Oct 2023 – Jan 2024

Photoacoustic Retinal Prosthesis

- Characterized palladium-doped PDMS materials for photoacoustic stimulation. Developed MATLAB automations to synchronize integrated lasers with 3-degree-of-freedom translation stages, enabling volumetric scanning to study underwater photoacoustic wave generation for material characterization.
- Validated photoacoustic sensitivity of the materials through simulations and experimental tests with human retinal ganglion cell cultures, demonstrating piezo excitation with 50 laser pulses at 10 Hz per position, recorded via multi-electrode array to confirm target engagement. Contributing author for abstract-based oral presentation at ARVO 2024.

Quantifying Prospective Component of Sense of Agency using Machine Learning

- Investigated pre-movement brain activity associated with intentional binding and the prospective Sense of Agency using a modified virtual Libet clock task, where voluntary movements were paired with probabilistic auditory feedback (0%, 50%, 75% probability). Applied analytical techniques in Python and MATLAB, including highly comparative time series analysis, spectral density estimation, and machine learning (SVCs, RFCs) to identify novel spatiotemporal EEG features.
- Discovered neural differences tied to action-outcome probabilities through high classification accuracies (74% to 100%) in distinguishing EEG signals across feedback blocks. Key features were localized to the pre-SMA and centroparietal regions, with distinct activity in the alpha and low gamma bands, in line with existing literature.
- Demonstrated the prospective Sense of Agency as a distinct neural phenomenon, providing new insights into the anticipatory neural mechanisms of agency and moving beyond traditional retrospective interpretations. Submitted research as Bachelor's Dissertation to the College of Engineering Pune. Bachelor's Dissertation [↗](#)

College of Engineering Pune • Departments of Electronics and Applied Sciences [↗](#) Pune, India
Undergraduate Researcher • Advisor: Mahesh H. Shindikar, PhD [↗](#) Aug 2022 – Aug 2023

Deep Learning-Based MRI Skull Tissue Segmentation

- Developed and evaluated vanilla, residual, and dense 2D U-Net deep learning architectures for automated skull stripping in MRI neuroimaging, achieving 99.75% accuracy with the dense 2D U-Net on a test dataset. Demonstrated the advantages of dense interconnections, enabling feature reuse across layers and allowing shallower models to match the performance of deeper networks.
- Highlighted the utility of deep learning for critical neuroimaging tasks and research pipelines, particularly in workflows requiring proprietary software to independently skull strip MRIs from diverse scanners. Implemented data augmentation to enhance robustness to multi-scanner variability and improve model performance. Delivered an oral presentation at ICBEST 2024, received the Best Paper Award among 50+ presentations.

Mitacs Globalink Research Intern • Advisor: Travis J. Esau, PhD [↗](#) May 2022 – Aug 2022

Automating Harvesters to Reduce Operator Cognitive Load

- Automated wild blueberry harvesters, enabling automatic berry bin switching and dynamic harvester head height adjustment to reduce operator cognitive and physical load. Developed a camera-based sensing electronic control system with Time-of-Flight and RGB cameras to monitor bin fill levels, achieving $\pm 10\%$ accuracy in volumetric analysis and automatic bin switching. Integrated crop height data and GPS from the tractor's CAN bus for real-time harvester head height adjustment via linear actuators, ensuring optimal alignment with low-lying blueberry shrubs.
- Piloted the system over two successful harvest days, receiving positive operator feedback and harvesting precision.

Queliz Lifetech • Early Stage Medtech Startup [↗](#) Pune, India
Research Intern • Electronics Subsystem Jun 2021 – Sep 2021

Point-of-Care Device for Finger Dexterity Rehabilitation in Acute Burn Patients

- Engineered electronics control systems for an affordable, portable rehabilitation device for burn patients, focusing on customized, accessible therapy for limited MCP, DIP, and PIP finger joint mobility.
- Recorded precise finger flexion-extension paths using OpenCV-based computer vision ($\pm 2\%$ path deviation) and integrated a closed-loop lead-screw actuation mechanism with adaptive feedback for accurate movement calibration.

TEACHING ENGAGEMENTS

- Principles of the Design of Biomedical Instrumentation** • Graduate Level, 34 Students Johns Hopkins
Teaching Assistant with Nitish V. Thakor, PhD Fall 2024
- Mentoring labs on designing ECG, EMG, EEG recording circuits and projects including accessible gaming, wearables.
- Haptic Interface Design for Human-Robot Interaction** • Graduate Level, 56 Students Johns Hopkins
Class Researcher with Jeremy D. Brown, PhD Fall 2024
- Helping pilot an online learning platform to provide self-paced lectures incorporating live instructor interaction.
- Mechatronics** • Senior Level, 58 Students Johns Hopkins
Teaching Assistant with Jeremy D. Brown, PhD Spring 2024, 2025*
- Received [recognition for solving a 3-year challenge](#) in real-time location polling of autonomous air hockey robots using ZigBee mesh. Contributed to [open-source PCB designs, code ↗](#). Led labs building, controlling maze-navigating robots.
- Biomedical Engineering Research Group** • 16 Students COEP
Founder, Research Mentor 2023 – Present
- [Founded a research group](#) to address the gap in medical research opportunities. [3 mentees awarded](#) national research fellowships at IISc Bangalore, IISER Pune, seed funding for medical innovations from Wipro and IIT Madras, total ₹50k.

INVITED TALKS

Haptics: Neural Basis, Applications, Future Avenues. **Johns Hopkins University, Sep 2024. Neural & Rehabilitation Engineering Course**, invited by *Nitish V. Thakor, PhD*.

SKILLS AND CERTIFICATIONS

Medical Research	Human participant studies (non-invasive devices), rodent studies (invasive devices, mice/rats), human perception experiment design, IRB protocols
Electronics	Analog and digital circuit design, microcontroller programming (Arduino/Teensy/ESP/STM), high-speed and high-current PCB design (KiCAD/Altium), closed-loop control systems, DAQ design, FPGA, RF design, precision soldering (THT/SMT), mechatronic integration, communication protocols
Programming & CS	Python, MATLAB, C/C++, data analysis, VR rendering, machine and deep learning, TinyML, TensorFlow (+lite/micro), computer vision, LaTeX
Fabrication & Design	FDM 3D printing (rigid/flexible), SLA resin printing, silicone molding, CAD (Autodesk), Adobe suite
Certifications ↗ (15 total courses)	Harvard Online • TinyML Certificate (3 courses), Python for Research, CS50 Web Development MIT Online • Aeronautics and Human Spaceflight Johns Hopkins Online • Human Subject Research, Neuroimaging, Neurohacking DeepLearning.AI • Deep Learning Specialization (5 courses) AICTE • Computer Science & Biology (faculty development program completed with permission)

ACADEMIC SERVICE

IEEE Haptics Symposium • Student Volunteer	2024
Canadian Society of Bioengineering Annual Meeting • Student Volunteer	2022

LEADERSHIP AND TEAMWORK

Johns Hopkins India Institute • Student Leader	Present
• Managing operations, logistics, sponsorships for university's first Hopkins India Conference , May 2025, Washington DC.	
Johns Hopkins Biomedical Engineering • Master's Program Representative	Present
• Represented the department at over 7 information sessions and conferences, including BMES 2024, upon invitation.	
COEP Impressions Cultural Festival • Head of Events (2021-22), Volunteer	2019 – 2022
• Led the planning and execution of 28 annual events with 10k attendees, managing a ₹2m budget and coordinated with an overall team of 126 members to execute concerts, competitions, and international celebrity engagements.	
• Built and led a team of 17 , working with two co-heads to build a platform from the ground up, fostering opportunities for budding artists across India and uniting them under a shared vision. Placed emphasis on unconventional art forms.	
Rowing Team • COEP, Pune City • Competitive 1X, 2X, 4X Sculler	2020 – 2022
• Won multiple race events and an institutional award commending motivation and skill . Represented Pune city at regional races . Coached new rowers for COEP's 95th Annual Regatta, India's longest-running college event.	
COEP Mental Health & Wellness Center • Student Volunteer	2020 – 2022
• Mentored a group of 18 freshmen, guiding their transition to college life. Promoted mental health support within the community through mentorship and poster/logo design.
